

Waste not, want not

*A previously unused space
is now a feature in itself*

This pool was unique in the challenges it presented to Sean Lynch and the team at Malibu Pools & Landscapes. Due to the steep slope, this section of the property was previously unused, wasted space.

To accomplish the engineering feat of constructing this pool, significant retaining walls and the pool shell structure were used to create levels in the yard. By reclaiming this wasted space, valuable real estate was regained and a welcoming recreation area created.

The pool features a modern water feature with a 1200mm water blade cascading over an imported porcelain

printed tile panel. This unique wet-wall design was created from the client's brief, partnered with the structural necessity of a large retaining wall on the pool shell.

Italian ceramic tiles bring a modern, sharp look to the pool coping and surrounds and allow the feature lighting to wash over the space at night. The LED colour-changing pool and garden lights are connected to a remote control, providing the ease of changing the feature lighting at the owner's every whim.

The work previously done on this house required a pool and landscape design-and-build package, for which Malibu Pools has become known. Sean Lynch was able to work with the client from concept design through construction to final handover and ensure every detail was created from the client's brief.

This project is an example of smart water-catchment systems used throughout to harvest runoff water and pool overflow into holding tanks used for landscape irrigation and pool top-ups. This self-sufficient space collects its own water and has reclaimed previously eroded, barren soil areas. The freshwater sanitation system available on all Malibu pools reduces chemical use and allows for the pool run-off and backwashed water to be reused on the gardens and turf.

"We make creative designs environmentally smart," explains managing architect, Sean Lynch. "My approach to sustainable environmental property design is unique and backed up by a construction team with over 30 years' experience. We design and

build a limited number of projects each year and focus on offering our clients a quality design and construction experience, from concept to completion."

Malibu Pools creates modern designs that are environmentally sustainable. The company's qualified environmental architects offer an unmatched perspective on the design of your pool and landscape project. By integrating the latest environmental technology into all their designs and construction techniques, they are leading the market in sustainable property design and development.

Malibu Pools & Landscapes, established more than 35 years ago, is now one of the leading pool design and construction companies in the country and has won several industry awards. Sean Lynch has been the managing architect at the company for more than five years. His background in environmental architecture brings

a unique perspective to design and construction and offers clients the latest in green design practices.

Focusing on a limited number of projects each year, Malibu Pools & Landscapes offers a complete package for pool and landscape projects. This begins with an on-site consultation with Sean Lynch to discuss the client's needs, the environment and the design brief. A virtual 3D design is then produced, allowing every project to be created, modified and swum through before construction starts.

Malibu Pools & Landscapes uses only in-house trade staff, guaranteeing a professional service and lasting quality of construction. The company services the southeast Queensland region.
